July 4, 2018

Mr. Shane Silsby
Director of Public Works
County of Orange
P O Box 4048
Santa Ana, CA 92702-4048

Dear Mr. Silsby:

In accordance with Title 23 of the Code of Federal Regulations (Federal Highway Act) and the National Bridge Inspection Standards (NBIS), Caltrans Structure Maintenance and Investigations performed an inspection of 6 bridges under your jurisdiction. The type of inspection is indicated on the bridge report transmittal sheet. The bridges have been rated to indicate their deficiencies, structural adequacy, safe load carrying capacity and overall general condition.

Enclosed are copies of the Bridge Inspection Reports for the structures noted on the attached transmittal sheet. These reports contain descriptions of physical changes to the structures since the last inspection, recommendations for work to be done, and additional information not recorded in the previous Bridge Reports.

Your attention is directed to the requirements of Title 23, Part 650 of the Code of Federal Regulations, where newly completed structures or any modification of existing structures shall be entered in the inventory within 90 days. Please notify this office of any newly constructed bridge or culvert within your jurisdiction, more than 20 feet measured along the center of the roadway and carrying public vehicular traffic or over a public roadway, in order that it may be entered in the inventory of bridge structures in compliance with Federal requirements.

Should you have any questions regarding the enclosed Bridge Inspection Reports, please contact Bing Wu @ (213) 897-0874.

Sincerely,

CHING CHAO
Office Chief
Structure Maintenance & Investigations - (Investigations-South)

Inspection Type Definitions

Routine Inspection:

Routine Inspections consist of both the initial Inventory Inspection (the first inspection of the bridge that places it in the bridge inventory or when there has been a change in the configuration of the structure) and subsequent regularly scheduled inspections. The initial inspection provides all the Structural Inventory & Appraisal (SI&A) data required by federal and state regulations, determines the baseline structural conditions, lists any existing problems, and establishes the load capacity of the structure. Subsequent inspections consist of observations, measurements needed to determine the physical and functional condition of the bridge, to identify any changes from the previously recorded conditions, and verification of its load capacity. These inspections are generally conducted from the deck, ground and/or water level, and from permanent work platforms and walkways, if present. Inspection of underwater portions of the substructure is limited to observations during low-flow periods and/or probing for signs of undermining. Special equipment should be utilized in circumstances where its use provides the only practical access to areas of the structure.

Fracture Critical, Special Feature & Underwater Inspections:

Fracture Critical, Special Feature, and Underwater Inspections are up close, hands-on inspections of one or more members above or below the water level to identify any deficiencies not readily detectable using Routine Inspection procedures. These inspections generally require special equipment such as under-bridge inspection equipment, manlifts, boats, traffic control, and railroad flagging. Personnel with special skills such as divers or structural steel inspectors trained in non-destructive testing techniques may be required.

Other Inspections:

Other Inspections are conducted on damaged structures, structures that have developed specific problems, or structures suspected of developing problems. The scope of these investigations should be sufficient to determine the need for emergency load restrictions or closure of the structure, monitor a changing condition, and to assess the level of effort necessary to effect a repair.

Posting Load : Type 3: Legal Type 3S2: Legal Type 3-3: Legal

DESCRIPTION ON STRUCTURE

Deck X-Section: (S) 1.50 ft br, 24.00 ft, 1.50 ft br (N)

Total Width: 8.2 m Net Width: 7.3 m No. of Lanes: 2 Speed: 25 mph
Min. Vertical Clearance: Unimpaired Overlay Thickness: 0.0 inches

Rail Code: 1000

Rail Type	Location	Length (ft)	Rail Modifications
MBBR	Right/Left	78	

DESCRIPTION UNDER STRUCTURE

Channel Description: Natural earth trapezoidal with a cobbled bottom.

NOTICE

The bridge inspection condition assessment used for this inspection is based on the American Association of State Highway and Transportation Officials (AASHTO) Bridge Element Inspection Manual 2013 as defined in Moving Ahead for Progress in the 21st Century (MAP-21) federal law. The new element inspection methodology may result in changes to related condition and appraisal ratings on the bridge without significant physical changes at the bridge.

The element condition information contained in this report represents the current condition of the bridge based on the most recent routine and special inspections. Some of the notes presented below may be from an inspection that occurred prior to the date noted in this report. Refer to the Scope and Access section of this inspection report for a description of which portions of the bridge were inspected on this date.

INSPECTION COMMENTARY

SCOPE AND ACCESS

This inspection was performed by walking on the bridge shoulders and deck, and under the span. A full visual inspection is performed for the visible substructure elements. The water in the channel was 8 inches deep at 8 feet wide at the time of the inspection.

The bridge deck was inspected on 12/15/2017 and the underside elements were inspected on 2/8/2018.

INSPECTION COMMENTARY

SUBSTRUCTURE

The wing wall adjacent to the north end of the east abutment has broken off at the base and tilted, this condition is old condition and does not appear to have any effect on the structure.

SAFE LOAD CAPACITY

The load rating for this structure is calculated on 08/30/2017 by SMI Ratings Branch using BrR 6.7.0 AASHTO analysis, and the load rating summary sheet is archived on 09/08/2016.

ELEMENT INSPECTION RATINGS AND COMMENTARY

Elem No.	Defect /Prot	Defect	Element Description	Env	Total Qty	Units	Qty in each Condition State St. 1	St. 2	St. 3	St. 4
12			Deck-RC	2	60	sq.m	5	34	21	0
	1080		Delamination/Spall/Patched Area	2	2		0	1	1	0
	1120		Efflorescence/Rust Staining	2	3		0	3	0	0
	1130		Cracking (RC and Other)	2	30		0	10	20	0
	1190		Abrasion (PS Conc./RC)	2	20		0	20	0	0

(12-1080)
The concrete deck exhibits:
* two areas of unsound concrete -/+ 12 inches X 12 inches at the north shoulder at 10 feet and 20 feet from the east end.
* two spalls +/- 12 inches X 5 inches X 1 inch at east end of eastbound lane.

(12-1120)
There were transverse cracks with white efflorescence, two cracks in each bay of the soffit.

(12-1130)
The concrete deck exhibits few transverse cracks, up to 1.5 mm wide and up to 10 ft long in both lanes.

(12-1190)
Most of the concrete deck exhibits light abrasion.

107			Girder/Beam-Steel	2	48	m	47	1	0	0
	1900		Distortion	2	1		0	1	0	0
	515		Steel Coating-Paint	2	100	sq.m	100	0	0	0

(107-1900)
In steel girder #4 (south), the bottom flange is damaged and bent at three different locations at mid-span, the total length of this deterioration is 18 inches total. (see the attached photo no. 1)

(107-515)
There were no significant defects noted.
The paint is fresh, may be done in 2017.

215			Abutment-RC	2	24	m	21	3	0	0
	1130		Cracking (RC and Other)	2	1		0	1	0	0
	1190		Abrasion (PS Conc./RC)	2	2		0	2	0	0

ELEMENT INSPECTION RATINGS AND COMMENTARY

Elem No.	Defect /Prot	Defect	Element Description	Env	Total Qty	Units	Qty in each Condition State St. 1	St. 2	St. 3	St. 4
			(215-1130) The west abutment exhibits a vertical crack, 0.03 inches wide under girder #3.							
			(215-1190) The west abutment exhibits few spots of abrasion at 1 foot from the ground, mostly at the southern half of the abutment.							
330			**Railing-Metal**	2	24	m	24	0	0	0
			(330) There were no significant defects noted. The south metal rail is noticed.
