Orange County Bridge Review Summary

Dokken Engineering performed a field review of the Orange County bridge listed below in April 2017 to identify maintenance activities eligible for Caltrans' Bridge Preventive Maintenance Program (BPMP), dated December 2015, funding. Additional maintenance activities, if present, not eligible for BPMP funding were also noted. Maintenance recommendations, if noted in the most recent Caltrans Bridge Inspection Report (BIR), were confirmed.

Bridge Number: 55C0123

Bridge Name: Brea Canyon Channel **Year Built:** 1939

Facility Carried: Brea Canyon BLVD

The Brea Canyon Channel at Brea Canyon Boulevard is a 3-span, simply supported, cast-in-place reinforced concrete T-beam with open end diaphragm abutments supported on concrete piles.

Caltrans BIR recommendations:

- Repair spalls in concrete baluster railings
- Repair wingwall and girder concrete spalls.
- Remove overgrown vegetation.

Field Inspection Observations

- Confirmed that the concrete railing has been damaged (photo 1), exposed reinforcement on concrete barrier.
- Missing P-markers at ends of bridge (photo 2). Recommend replacing P-markers .
- Longitudinal soffit cracks (photo 4), although no efflorescence visible. Monitor condition and consider sealing deck to prevent water from seeping through cracks if condition worsens.
- Exposed rebar on girder soffit (photo 5).
- Excessive AC on deck, which will reduce load capacity and long-term bridge health. (photo 6 & 7). Recommend no additional AC overlay, and County may consider removing some of the AC.

Maintenance Needs Assessment

BPMP Assessment

• N/A – No eligible maintenance activities

<u>General Maintenance - Non-BPMP</u>

- Recommend patching spalls in concrete baluster railings.
- Recommend patching spalled concrete for exposed rebar on girder soffit.
- Replace missing P-Markers.

Proposed BPMP Construction Costs

N/A

Construction Items Not Funded by BPMP

- Bridge barrier repair likely not eligible for BPMP funding since the repair work will not bring railing up to current standards. Cost to repair delaminated barrier and soffit concrete and patch ≈\$35,000 (includes engineering, traffic control, mobilization and contingency)
- Deck sealing not critical at this time.

Channel Description: Natural earth trapezoidal, RC rectangular through the site.

NOTICE

The bridge inspection condition assessment used for this inspection is based on the American Association of State Highway and Transportation Officials (AASHTO) Bridge Element Inspection Manual 2013 as defined in Moving Ahead for Progress in the 21st Century (MAP-21) federal law. new element inspection methodology may result in changes to related condition and appraisal ratings on the bridge without significant physical changes at the bridge.

The element condition information contained in this report represents the current condition of the bridge based on the most recent routine and special inspections. Some of the notes presented below may be from an inspection that occurred prior to the date noted in this report. Refer to the Scope and Access section of this inspection report for a description of which portions of the bridge were inspected on this date.

INSPECTION COMMENTARY

SCOPE AND ACCESS

The inspection was performed by walking on and under the bridge. There was about 2" of water in both spans; all elements were visually inspected. There is no shoulder and access to under the bridge was from northwest quadrant.

INSPECTION COMMENTARY

SAFE LOAD CAPACITYA

Load Rating Summary Sheet dated 8/28/2015 is on file for this structure. While this report does not include a check of that analysis, it does verify that the structural conditions observed during this inspection are consistent with those assumed in that analysis. The current rating is based on LRFR calculation.
