Orange County Bridge Review Summary

Dokken Engineering performed a field review of the Orange County bridge listed below in April 2017 to identify maintenance activities eligible for Caltrans' Bridge Preventive Maintenance Program (BPMP), dated December 2015, funding. Additional maintenance activities, if present, not eligible for BPMP funding were also noted. Maintenance recommendations, if noted in the most recent Caltrans Bridge Inspection Report (BIR), were confirmed.

Bridge Number: 55C0404

Bridge Name: Anaheim-Barber City Channel **Year Built:** 1959

Facility Carried: Dale Street

The Anaheim-Barber City channel culvert at Dale Street is a reinforced concrete double box culvert.

Asphalt concrete overlay on deck.

Caltrans BIR recommendations:

• Patch east headwall spalls

Field Inspection Observations

- Spalled post pocket on east side (photo 3).
- Utility on the west side dripping water (photo 4), constantly keeping concrete wet.
- Minor soffit spall at east abutment/headwall (photo 4).
- Minor efflorescence visible on soffit (photo 5).

Maintenance Needs Assessment

BPMP Assessment

• N/A – No eligible maintenance activities

General Maintenance - Non-BPMP

- Recommend patching spalled concrete. No immediate actions required since not a high priority.
- Efflorescence likely from water penetrating through deck. Not significant problem at this time. To repair will require deck AC removal, deck treatment, and grinding approach AC to conform to lower deck elevation.
- Recommend contacting utility owner to repair water drip problem.

Proposed BPMP Construction Costs

N/A

Construction Items Not Funded by BPMP

- Repair Spalls < \$10,000 (includes engineering, mobilization and contingency)
- Utility repair should be funded by utility company

DESCRIPTION UNDER STRUCTURE

Channel Description: RC trapezoidal upstream and downstream.

NOTICE

The bridge inspection condition assessment used for this inspection is based on the American Association of State Highway and Transportation Officials (AASHTO) Bridge Element Inspection Manual 2013 as defined in Moving Ahead for Progress in the 21st Century (MAP-21) federal law. The new element inspection methodology may result in changes to related condition and appraisal ratings on the bridge without significant physical changes at the bridge.

The element condition information contained in this report represents the current condition of the bridge based on the most recent routine and special inspections. Some of the notes presented below may be from an inspection that occurred prior to the date noted in this report. Refer to the Scope and Access section of this inspection report for a description of which portions of the bridge were inspected on this date.

INSPECTION COMMENTARY

SCOPE AND ACCESS

There channel was dry, the inspection performed by walking on the road and under. There was no access to the channel the inspector jump the CLF. All elements were visually inspected.

SAFE LOAD CAPACITY

A Load Rating Summary Sheet is included with this bridge inspection report. The current rating has been assigned in accordance with SM&I procedures.
